The medication functions by raising the flow of blood to the male organ. This makes the male organ hard and helps men acquire hard erections during sensual communication.

### Early signs of Impotence in men

It is essential to know about the early signs of erectile disorder in men. When a man suffers from the problem of erectile disorder he has trouble while trying to achieve and maintain an erection. He even suffers from:

- Low sensual drive
- Loses ability to acquire orgasm

It is essential to discuss the signs of the illness with your healthcare provider for early detection and treatment of this sensual condition. Men can make various changes in their lifestyle to improve this sensual dysfunction.

### Nerve Damage Due to Impotence

Many times men who suffer from various medical conditions suffer from nerve damage. This nerve damage is the major reason behind the occurrence of erectile disorder. The nerve responsible for generating erections gets harmed due to which it becomes impossible for a man to gain erections during the sensual contact.

**Various conditions that cause nerve damage, such as:**

- diabetes
- multiple sclerosis
- chronic alcohol use
- heavy metal poisoning
- nerve damage from surgery, such as from a pelvic operation
- nerve and spinal cord injuries
