ABOUT US

DeskTrack is software that enables companies to monitor employee activity and time. It can be used to monitor staff break periods, application usage, website visits, and login/logout timings. It also offers thorough reports on worker performance and productivity. DeskTrack is a potent tool that can assist firms in enhancing worker morale, lowering costs, and increasing compliance.

SERVICE

Remote Work Monitoring Software

DeskTrack is a comprehensive **remote work monitoring software** that offers time shadowing, operation monitoring, website shadowing, and design/ task shadowing. It provides detailed perceptivity into hand productivity, helping employers identify backups and optimize workflows. DeskTrack robust reporting capabilities make it a precious tool for managing remote brigades effectively.

CONCLUSION

Software for tracking remote work is essential for managing and maximizing remote brigades. Through providing insight into manual labor, monitoring output, and streamlining correspondence, these solutions assist companies in functioning more effectively in a remote work environment.
