How to Clean your Bathroom Fast and Effectively

The bathroom is the most important room in a house. This is the first place where everyone goes first thing in the morning. You can manage without a kitchen, a bedroom, or a drawing room at your house but managing without a proper bathroom that too in urban areas is next to impossible. It is basic human body functionality to excrete waste materials and body products and for that reason, bathrooms are a necessity. As the bathroom is clearly significant to us, we should maintain it and frequently clean it well because an unhygienic, filthy, and unmaintained bathroom is bound to pose health hazards.

But it's also a fact that bathrooms are the places that need the most cleaning as germ build-ups can form in all sorts of places like toilets, showers, bathtubs, and all sorts of other surfaces. It takes both time and effort to get rid of these build-ups. It is always a great option to call up a professional and reliable **bathroom cleaning service in Bhubaneswar** like TechSquadTeam and dispense with the problem altogether but some of you might want to do it yourself. Here are a few ways to clean your bathroom fast and efficiently by yourself.

A. **Removing all items from the room –** before starting up any actual work, simply remove all your bathroom products from the room, so that the dust does not accumulate on them while you dust away other places. Removing all your towels, bathroom products, and trashcans can make it easier for you to clean properly and quickly.

B. **Dusting and Sweeping –** Dusting all the cobwebs and filth out of the shelves, exhausts, corners, light fixtures, vents, and from behind the doors. Then sweep and mop the floors for any unwanted hair or dirt that might have accumulated over time.

C. **Applying a coat of cleaner to Showers –** If you have a major build-up that is simply impossible to clean up even after vigorous scrubbing, then just apply a coat of your cleaner to the shower, the shower door, the bathtub, etc., wherever there is build up and leave it overnight and let it soak.

D. **Tackling other surfaces –** Spray the cleaner on everything in your bathroom, may it be towel racks, doors, mirrors, blinds, window sills, etc., and start wiping everything in sections either from top to bottom or left to right and vice versa.

E. **Cleaning the floor –** It is recommended to use warm water with your cleaner to kill the germs while cleaning your floor.

F. **Replacing all items –** Now you can replace all the items that you have taken out of the room and just keep them in the cleaned-up and sparkling places where they belong.

G. **Cleaning the toilet –** Cleaning your toilet is the dirtiest work. Keep it for the last. The toilet is a place laden with germs and you don't want to deal with other things after coming in contact with bacteria and viruses. So take your toilet cleaner and simply scrub out the toilet.

H. **Mopping the floor –** the last thing that you need to do is just mop the floor one last time to get anything that was skipped. You can see that your bathroom is sparkling clean.

After all the cleaning, you can just take a refreshing bath and relax for the next few days. However, if you think that your time is too valuable and do not want to invest an entire afternoon in your toilet, TechSquadTeam, one of the best providers of **bathroom cleaning in Bhubaneswar**, is always here to your rescue. Just give us a call on 07795001555 or book an appointment at https://techsquadteam.com and we will be there at your doorstep at your schedule and time.
