

Stop ED & Sexual Problem with an Effective Solution Extra Super M Force

[Erectile dysfunction](#) (ED) and premature ejaculation (PE) are two common sensual dysfunctions affecting many men worldwide. ED is characterized by the inability to achieve or maintain an erection sufficient for sensual intercourse. At the same time, PE is defined as the inability to control or delay ejaculation during sensual activity, leading to unsatisfactory sensual experiences for both partners. These conditions can cause significant distress, anxiety, and depression in men, affecting their self-esteem and quality of life. Fortunately, effective treatments are available for both ED and PE, including [Extra Super M Force](#), a medication that combines two active ingredients to address both conditions simultaneously.

Extra Super M Force
(Sildenafil 100mg(USP) +Dapoxetine 100mg)

What is [Extra Super M Force](#)?

[Extra Super M Force](#) is a combination medication that contains two active ingredients: [sildenafil citrate 100mg](#) and [dapoxetine 100mg](#). [Sildenafil citrate](#) is a phosphodiesterase type 5 (PDE5) inhibitor commonly used to treat ED. It works by increasing blood flow to the genital area, which helps to produce and maintain an erection.

On the other hand, [Dapoxetine](#) hydrochloride is a selective serotonin reuptake inhibitor (SSRI) used to treat PE. It works by delaying the ejaculation process, which helps men to last longer during sensual activity and satisfy their partners.

[Extra Super M Force](#) is a well-known pharmaceutical company based in India. It is available in tablet form and is typically taken orally with a glass of water. The medication is usually prescribed by a doctor or healthcare provider and should only be used under their guidance.

How does [Extra Super M Force](#) work?

[Extra Super M Force](#) targets two aspects of male sensual function: erectile function and ejaculatory control. [Sildenafil citrate](#), the ED medication in [Extra Super M Force](#), works by relaxing the blood vessels in the genital area, allowing more blood to flow into the area. This increased blood flow helps to produce and maintain an erection during sensual activity.

[Dapoxetine](#) hydrochloride, the PE medication in [Extra Super M Force](#), works by inhibiting serotonin reuptake in the brain. Serotonin is a neurotransmitter that regulates mood, emotions, and sensual function. By increasing the levels of serotonin in the brain, dapoxetine helps to delay the ejaculation process, allowing men to last longer during sensual activity.

Taken together, the two active ingredients in [Extra Super M Force](#) work synergistically to provide men with a more satisfying and fulfilling sensual experience. By addressing both ED and PE, the medication can help men to achieve and maintain an erection, delay ejaculation, and enjoy a more prolonged and pleasurable sensual activity.

How should [Extra Super M Force](#) be taken?

[Extra Super M Force](#) should be taken approximately 30-60 minutes before sensual activity. The medication should be taken with a full glass of water and not with alcohol or grapefruit juice, as these substances can interfere with the effectiveness of the medicine.

The recommended starting dose of [Extra Super M Force](#) is 100mg of [sildenafil citrate](#) and 60mg of [dapoxetine](#). However, the amount may need to be adjusted based on individual factors such as age, weight, and medical history.

How effective is [Extra Super M Force](#)?

[Extra Super M Force](#) has been clinically proven to be an effective treatment for both ED and PE. In a study published in the Journal of sensual Medicine, researchers found that men who took [Extra Super M Force](#) had a significantly higher rate of successful sensual intercourse than those who took a placebo.

The study involved 244 men who had both ED and PE. They were randomly assigned to receive [Extra Super M Force](#) or a placebo for 12 weeks. The results showed that 79% of the men who took [Extra Super M Force](#) could achieve and maintain an erection sufficient for sensual intercourse, compared to 26% of those who took the placebo.

In addition, the men who took [Extra Super M Force](#) reported a significant improvement in their ejaculatory control. They also reported higher levels of sensual satisfaction and overall improvement in their quality of life.
