### What is **Prejac 60**?

**Prejac 60** is a medication specifically formulated to treat premature ejaculation. It contains the active ingredient **Dapoxetine 60mg**, which belongs to a class of medicines known as selective serotonin reuptake inhibitors (SSRIs). **Dapoxetine 60mg** works by increasing the levels of serotonin in the brain, which can help delay ejaculation and improve control over ejaculation.

### Benefits of **Prejac 60**

- The primary benefit of **Prejac 60mg** is the enhancement of control over ejaculation. This means that men can last longer during sensual intercourse, leading to a more satisfying sensual experience for both partners.
- Delaying ejaculation allows couples to engage in longer-lasting sensual activity, increasing overall sensual satisfaction.
- Knowing that they have a tool to help them last longer in bed can reduce performance anxiety and stress related to premature ejaculation.
- Improved sensual performance can lead to enhanced intimacy and better relationships between partners.

### Dosage and Administration

The typical recommended dose of **Prejac 60mg** is one tablet taken orally 1 to 3 hours before sensual activity. It is advisable to consume it along with a generous glass of water. It

is essential to stay within the recommended dosage, as doing so may increase the risk of side effects.

## Precautions
